

LEVEL 8

The Glass Engine

Read Aloud

A boy lived in a small town in the **east** of **England**. In school, his class studied **history**. The teacher brought a small **engine**, a **glass** line, and a little **gas**. “Today we will do an **experiment**,” she said. “Watch how air and **gas** **flow** through the **glass**.”

The boy put his **ears** close, but not too close. The **engine** began to sound like a song. Then the **gas** **flow** **grew** strong, and the **glass** shook. A girl **fell** back from surprise, but she was well. “Thank **God**,” said the teacher. “Now, what **feeling** do you have?”

“I feel wonder,” said the boy. “A **human** mind made this machine. Long ago, people were **hunting** for food. Now we use engines to travel and work.”

The teacher smiled. “Good. **Information** from the past can help us make our world better. Each question is **equal** in my class, so **express** your idea. If we all ask questions, our ideas **increase**.”

No one wanted to do anything **else** that day.
